📘 UI/UX Design with Figma

🎯 Course Description

This course teaches students how to **design user interfaces and user experiences using Figma**, a free and widely-used design tool. Students will learn to **create wireframes, prototypes, and interactive designs** for web and mobile applications while applying UI/UX best practices.

🎓 Learning Outcomes

By the end of this course, students will be able to:

1. Understand the fundamentals of UI/UX design
2. Navigate and use Figma's interface and tools
3. Create wireframes, mockups, and interactive prototypes
4. Apply design principles like hierarchy, spacing, color theory, and typography
5. Conduct user research to design user-centered applications
6. Plan website and app architecture for effective UX
7. Collaborate and share projects using Figma
8. Prepare portfolio-ready designs for web and mobile apps

🧩 Course Structure

🟢 MODULE 1: INTRODUCTION TO FIGMA

Topics:

- What is UI/UX design and why it matters
- Overview of Figma: features and benefits
- Creating an account and exploring the workspace
- Panels, layers, and menus

Practical:

- Sign up for Figma
- Explore home screen, tools, and menus

🟡 MODULE 2: BASIC TOOLS AND SHAPES

Topics:

- Frames, shapes, and text tools
- Pen tool and vector shapes
- Layers, grouping, and alignment
- Snapping, spacing, and grids

Practical:

- Create a simple mobile screen layout
- Practice grouping, aligning, and spacing elements

🔵 MODULE 3: DESIGN PROCESS AND AUDIENCE RESEARCH

Topics:

- Understanding a design brief
- User research and target audience
- Paper wireframing
- Translating paper wireframes to digital screens

Practical:

- Conduct mini-audience research
- Design a low-fidelity wireframe for a sample app

🟣 MODULE 4: WIREFRAMES & PROTOTYPES

Topics:

- Low-fidelity vs high-fidelity wireframes
- Creating interactive prototypes
- Navigation flow and user experience mapping

Practical:

- Build interactive screens (e.g., login → dashboard → settings)
- Test clickable prototype

🔴 MODULE 5: DESIGN RESOURCES & STYLES

Topics:

- Free icons, fonts, and UI kits
- Color theory and typography
- Components and reusable styles in Figma

Practical:

- Apply consistent colors, fonts, and components to a design
- Import and use free icon libraries

🟠 MODULE 6: WEBSITE & APP ARCHITECTURE

Topics:

- Structuring screens for web or mobile apps
- Mapping user journey
- Organizing pages, menus, and navigation

Practical:

- Create a sitemap for a sample app
- Design main screens according to architecture

🟢 MODULE 7: COLLABORATION & FEEDBACK

Topics:

- Real-time collaboration in Figma
- Sharing projects and gathering feedback
- Version control and comments

Practical:

- Collaborate with a partner on a project
- Implement feedback in your design

🔵 MODULE 8: FINAL PROJECT

Topics:

- Developing a complete interactive prototype in Figma
- Applying wireframes, interactive components, and design principles
- Preparing for portfolio or presentation

Practical:

- Design a **fully interactive prototype** for a mobile or web app
- Example projects: To-Do List App, Recipe App, Event Planner

---

🧪 Final Assessment

Project:

- Submit a complete Figma prototype with:
  - Multiple interactive screens
  - User-centered design
  - Consistent styling and typography
  - Navigation flow and feedback implementation

📊 Assessment Breakdown

- Assignments → 20%
- Practical Work → 40%
- Final Project → 40%
